

Meme project – assignment #1

Maxime Bury
Advanced Web Design

August 29, 2012

The concept This website will allow users to contribute “Knock knock jokes” in text form. This meme would be accessible by anyone with a basic understanding of English.

There is essentially two variable parts in the joke : the “who” and the “punchline”. Additionally, some knock knock jokes are comprised of several knock knock jokes, such as in the banana / orange joke. Thus a joke is composed of a “who” block and then either a “punchline” block or another knock knock joke.

Features

- Users will be able to submit a joke by filling in a form, adding field dynamically as needed.
- Users will be able to vote jokes up or down (1 vote / joke / ip / 24h)
- The main page will display an infinite list of jokes, with the n best jokes appearing at page load and the rest being pulled from the server as the user scrolls down.

Technicalities

- <https://github.com/KnpLabs/KnpRadBundle>
- <http://airbnb.github.com/infinity/>
- H5BP / HTML5 / CSS3 / jQuery
